

AI Engineer

Sample Job Description | Full-Time | Bengaluru, India

About the Role

We are looking for an AI Engineer to design, build, evaluate, and deploy machine learning and generative AI solutions. The ideal candidate enjoys turning complex AI concepts into reliable, production-ready applications and is comfortable working across data, models, APIs, and cloud infrastructure.

Key Responsibilities

- Develop and deploy machine learning and generative AI applications.
- Build Retrieval-Augmented Generation (RAG) systems using document processing, embeddings, vector databases, and LLMs.
- Design and integrate AI services and REST APIs using Python and FastAPI.
- Experiment with LLMs, prompt engineering, evaluation techniques, and AI agents.
- Process, clean, and analyze structured and unstructured data.
- Collaborate with software engineers and product teams to integrate AI capabilities into applications.
- Evaluate model quality, latency, reliability, and cost, and continuously improve AI systems.
- Write maintainable, well-tested, and documented production code.

Required Qualifications

- **Python** programming and strong software development fundamentals.
- Understanding of machine learning concepts and common ML workflows.
- Experience with **Generative AI**, Large Language Models (LLMs), and prompt engineering.
- Hands-on knowledge of **LangChain**, RAG pipelines, embeddings, and vector databases.
- Experience building APIs with **FastAPI** or a similar Python framework.
- Familiarity with Git, GitHub, debugging, and collaborative software development.
- Strong problem-solving and analytical skills.

Preferred Qualifications

- Experience with LangGraph or multi-agent AI systems.
- Knowledge of Docker and containerized deployments.
- Experience with AWS or another major cloud platform.
- Familiarity with vector databases such as ChromaDB, FAISS, or Pinecone.
- Understanding of model evaluation, observability, and LLM application monitoring.
- Experience working with REST APIs and third-party AI services.

Technical Skills

Programming: Python, SQL

AI/ML: Machine Learning, Generative AI, LLMs, Prompt Engineering, RAG

Frameworks: LangChain, LangGraph, FastAPI

Data & Retrieval: Embeddings, Vector Databases, ChromaDB, Document Processing

Cloud & DevOps: AWS, Docker, Git, GitHub

APIs: REST APIs, AI/LLM APIs

What We Value

We value curiosity, practical problem-solving, clean engineering, continuous learning, and the ability to communicate technical ideas clearly. Candidates who can demonstrate working AI projects and explain their design decisions are especially encouraged to apply.

Education & Experience

Bachelor's degree in Computer Science, Artificial Intelligence, Data Science, or a related field. Internship, academic, or project experience in AI/ML is welcome. Professional experience is a plus but not mandatory for entry-level candidates.
